Introduction

Dear Customer,

Thank you for ordering Social Bookmarks Submitter - world's first and most sophisticated bookmarking solution designed for slow and natural backlinks building.

In order to achieve the best results possible, your server needs to have cURL and Zend Optimizer modules enabled (99% of hosting providers offer these modules by default).

Below you will find some hosting companies that offer premium hosting packages at a surprisingly low price. These providers are used by our clients for years, and all of them are very satisfied with fast, stable and reliable servers that are used to host Social Bookmarks Submitter software and their personal/business web sites.

[DimeReseller](http://www.webmasterbook.net/resources/dimereseller.php) (see more details and hosting packages from hosting company at <http://www.webmasterbook.net/resources/dimereseller.php>). If extreme performance and money-saving are your main goals, it's a great idea to use **Reseller** package which allows hosting unlimited number of domains (no extra charges) on super-fast servers.

[Hosting24](http://www.webmasterbook.net/resources/hosting24.php) (see more details and hosting packages from hosting company at <http://www.webmasterbook.net/resources/hosting24.php>). It's highly suggested to use Gold or Reseller plans for best results and maximum performance.

Attention! Enter coupon code **savebig** on Hosting24 order form and \$2 *recurring monthly discount* will be applied to your order! The code is valid for all hosting plans and billing periods.

Customer Support

If you experience any troubles installing or using the software, please visit informative and continuously updated software knowledgebase at <http://www.adsenseboy.com/support/> which was designed to save your time and provide detailed answers to frequently asked questions as well as step-by-step solutions solving most common issues.

If the installer does not work properly, cronjobs do not function, or if you experience any other issues, the knowledgebase will guide you every step of the way solving the issue. Please note; searching knowledgebase instead of submitting support tickets is always easier and faster!

Your order comes with a premium customer service and professional assistance. The only thing you are asked for; in order for our support team to provide the best service and instant assistance (without a delay due to additional questions), please read the support desk rules before submitting support tickets.

- *All types of support requests and technical questions should NEVER be sent to the sales email or contact form. Sales email and contact forms are used for pre-sale questions only. Therefore, support requests sent to the sales email are deleted without any notice.*
- *For 1st class customer support and faster assistance please use official software forum at <http://www.forum.adsenseboy.com/> or private support desk at <http://www.adsenseboy.com/support/> to get all questions answered in minutes.*
- *Please always include software login information (software administration panel URL, username and password) and FTP login details (hostname, username and password) when submitting a new support ticket, so our programmers can start working on your issue instantly.*
- *If one of your questions is not answered yet, please do NOT submit a duplicated ticket. If you have the same question asked via multiple tickets, our support system automatically marks all your tickets as "low priority" and you will have to wait for the assistance much longer.*
- *Submit a new support ticket for each new question or problem. If the first problem is solved and you have another question or problem, do not update the old ticket and submit a new one instead. However, if your old issue is not fully solved, please update the old ticket instead of submitting a new one in this case.*

Extremely Important Information

Please take a moment to read **EVERYTHING** on this page. These simple tips will save your time and prevent you from making costly and embarrassing mistakes!

- *If you experience any problems installing Social Bookmarks Submitter, please download the video tutorial from <http://www.submitbookmark.com/videotutorial.zip> for step-by-step instructions on installing and using the software.*
- *If the software requires cronjobs to be enabled, you should NEVER copy/paste the cronjob commands from this user guide into your control panel. Depending on your PDF reader, cronjob command might get corrupted and cause problems later (even if it looks perfect visually). Please ALWAYS enter cronjob commands manually.*
- *Please always refer to this user guide, video tutorial, knowledgebase and help section in the software itself for answers to your questions and solutions to possible problems. If you submit a new support ticket with question/problem which is already answered/solved in user guide, video tutorial, and knowledgebase or help section, the support ticket will be closed.*
- *When submitting a new support ticket, please always follow support desk rules (explained in the 'Customer Support' section above). Failure to comply with these rules (for example: no login information is provided) will cause support ticket closure and/or deletion.*

That's all you are kindly asked for. Please follow these simple rules and you will experience the best client service you ever had. Prove it yourself!

License Validation

In order to prevent software piracy and unauthorized usage, this software comes with advanced license validation system.

The software remotely sends callbacks with IP address, user credentials and other usage information to our servers in order to track software installation(s). The software tracks installation details only and does not collect personal user information in any way.

If customer shares his license with other people (installation details and IPs used to launch installer are automatically sent to our servers), the license might be temporarily deactivated or terminated and all installations performed using the same licensed email will automatically stop working. If license is terminated because of unauthorized usage, no refunds are provided and support contract becomes invalid.

The software also comes with a protection against fraudulent orders. When a new purchase and/or new installation is performed, the installation wizard connects to our license database. Your details (home IP address, server IP address, IP address used to make order or launch installation wizard, etc.) are stored on this database. In case the order is fraudulent (or customer wants to make a chargeback), the license is remotely terminated.

Finally, in case of fraud or unauthorized usage, all stored information is forwarded to the Internet Crime Complaint Center, National White Collar Crime Center, customer bank department and hosting provider (requesting to terminate hosting service immediately).

Automatic Software Installation + Configuration + Hosting

For best website promotion experience we recommend using software hosting and management service. In order to activate it, login to client area at <http://www.submitbookmark.com/customers.html> and go 'Hosting' section in navigation bar.

Click 'Activate Software Hosting Service' link and our team of experts will install and configure the software on powerful servers for you. Furthermore, your installation will be continuously monitored and automatically updated to the latest version even before it becomes available to the public. Software hosting service saves your time and money; get it today!

Automatic Software Installation

Social Bookmarks Submitter could be remotely uploaded to your server and automatically installed via client area. The instructions on how to perform such installation automatically are available below.

Login to customer center at <http://www.submitbookmark.com/customers.html> and refer to 'Installations Management' section.

Click 'new automatic installation' link and follow instructions on the screen to automatically install and configure the software on your server. Single installation allows you to promote unlimited number of sites hosted on different servers, so there is no need to make a separate installation on each site you own.

It's also highly recommended to protect your social_admin directory with a password ('Password Protected Directories' feature is available in cPanel) for extra security.

Attention! Automatic software installation works with cPanel servers only. The feature works only for domains that have separate cPanel accounts (for example, it will not work on addon domains because addon domains share the same username with main cPanel account).

Manual Software Installation

Installing this powerful software manually is easy as well. Please follow the step-by-step instructions below to complete Social Bookmarks Submitter installation.

Upload all files to the domain where you wish the software to be installed. All files must be uploaded in BINARY mode (refer to your FTP client help section if you are unsure how to configure FTP software for BINARY uploads). Usually the files need to be uploaded to public_html or httpdocs directory.

Set folder 'social_captcha' and file 'chmod_sbs_config.php' and 'chmod_sbs_cookie.txt' permissions to 777 using FTP client software.

Login to your cPanel (or another control panel offered by your hosting provider) and setup a new MySQL database and MySQL user/password. Add this MySQL user to the database and grant all permissions.

Run your browser and open http://www.yourdomain.com/social_install/ to start the installation wizard. If you need more information regarding any option, simply move mouse cursor over it for an interactive popup with more details and examples.

As soon as all fields are filled, click the 'Start Installation' button. If any errors are detected, the installation wizard will provide detailed instructions on how to fix them. Otherwise, you will be able to login to the administration interface and start using the software instantly.

Finally, delete 'social_install' directory and set file 'chmod_sbs_config.php' permissions to 644 ('social_captcha' and 'chmod_sbs_cookie.txt' should have permissions set to 777). It's highly recommended to protect your social_admin directory with a password ('Password Protected Directories' feature is available in cPanel) for extra security.

The installation is now finished, and it's time to perform post-installation steps that are explained in next chapter.

Attention! If you would like someone to perform Social Bookmarks Submitter installation for you, simply contact our certified partner [FixMyScript](#) (provide your licensed email address and cPanel/FTP login details) and their experienced programmers will setup and configure the software on your server in minutes.

Post-Installation Steps (Cronjobs)

Social Bookmarks Submitter is 100% automated bookmarking software and does not require any user interaction because all modules are automatically launched using cronjobs.

The software uses the only cronjob to automate each single task. The cronjob is explained below:

1. `social_posting.php`; launches bookmarking engine which is responsible for domain tags parsing and submission.

The cronjob for this module should look like in this example:

```
php -q /home/cpanel_username/public_html/social_posting.php
```

The example above is based on cPanel server. If your hosting provider uses another control panel, please ask their support team for more information on how to setup cronjobs properly.

Attention! Variable 'cpanel_username' should be changed to the real username of your cPanel account. For example, if your cPanel username is 'someuser', the correct cronjob for bookmarking engine will be:

```
php -q /home/someuser/public_html/social_posting.php
```

Attention! Never copy/paste cronjob command from this user guide and always enter it manually, otherwise the software will not work.

Attention! There must be a space symbol before and after '-q'.

Attention! If the software is installed on a subdirectory, its name should be added to the cronjob as well. For example, if your cPanel username is 'someuser' and the software is installed on 'abc123' directory, the correct cronjob will be:

```
php -q /home/someuser/public_html/abc123/social_posting.php
```

The screenshot below contains one of possible cronjob configurations.

MINUTE	HOUR	DAY	MONTH	WEEKDAY	COMMAND	ACTIONS
0	*/12	*	*	*	<code>php -q /home/someuser/public_html/social_posting.php</code>	Edit Delete

In this example, bookmarking engine is launched every 12.

To prevent your IP address from being blacklisted, it's not recommended to launch bookmarking engine more often than every 6 hours, no matter how many domains you promote.

Needless to say, you can also configure any module to be launched only once a day, week or month; it's up to your personal needs and expectations. All you need to do is contact your hosting provider for correct cronjob configuration in this case.

Administration Interface

This section is used to view Social Bookmarks Submitter installation details, add promoted domains, manage social bookmarking sites, view detailed software activity, marketing reports, and more...

Should you need any assistance using Social Bookmarks Submitter, check out Software Configuration Wizard below for step-by-step instructions on how to setup and optimize your installation for maximum performance.

For even more useful tips and suggestions, refer to the Help & Support menu above or simply move mouse cursor over any item you need assistance with; interactive help wizard will display even more information about each supported feature.

PROMOTED DOMAINS

Add New Domains

This section is used to add new domains to be promoted. The software supports top-level domains, subdomains, individual pages and links with redirects.

Unlimited number of domains could be added here. Each new domain should start in new line and have http:// or http://www. prefix to be accepted.

Edit Domains

This section is used to manage domains that are promoted. If domains have multiple meta tags entered, the software will randomly spin tags during bookmarking.

If any domain needs to be permanently deleted, check the box near domain URL and click 'Edit Domains' button.

SOCIAL ACCOUNTS

Add New Accounts

This section is used to add new accounts that are used on bookmarking sites. If more than one account is added, Social Bookmarks Submitter will automatically select a random account each time when bookmarking module is launched.

When new accounts are added, they should be registered using Edit Accounts section (registration is automated). It's highly recommended using at least 5 accounts, but higher number is suggested for best results.

Edit Accounts

This section is used to manage user accounts. Status field indicates registration (1st icon) and activation (2nd icon) status of each account. Before accounts can be used for bookmarking, they need to be registered. When account is registered clicking the first icon, it also becomes active. If account is not registered or activated, it will not be used for bookmarking.

If you don't want some accounts to be used for a while, they can be temporarily deactivated clicking activation status icon. Any account could be activated/deactivated anytime. If any account needs to be permanently deleted, check the box near account name and click 'Edit Accounts' button.

ADVANCED PLUGINS

Feed Spider

Do you have daily updates blogs, news portals or message boards and want to promote new content as soon as it becomes published? Activate RSS feeds spider plugin and see how it automatically scans and promotes each single entry from unlimited number of RSS feeds.

As soon as new page is published on one of your pages, the plugin adds its URL to promoted domains database and the software starts building a large number of backlinks to this page instantly. No user interaction required!

Sitemap Spider

Sitemap spider plugin is #1 choice for webmasters who want to promote every single page of their websites. Sophisticated plugin automatically scans sitemap files and adds each URL to promoted domains list for 100% automatic promotion.

The plugin scans unlimited number of sitemap files every few hours and removes all duplicated records on autopilot. Now you can experience for yourself how easily you can automate the promotion of hundreds or even thousands of pages located under multiple domains. The easiest and simplest solution on the market!

PHPDug Bookmarks

PHPDug bookmarks plugin adds PHPDug sites support with the help of PHPDug Social Poster to your Social Bookmarks Submitter installation for even more effective bookmarking. The plugin automatically transfers your domains and accounts to PHPDug Social Poster installation and starts bookmarking instantly.

Pligg Bookmarks

Pligg bookmarks plugin adds Pligg sites support with the help of Automatic Pligg Submitter to your Social Bookmarks Submitter installation for even more effective bookmarking. The plugin automatically transfers your domains and accounts to Automatic Pligg Submitter installation and starts bookmarking instantly.

Scuttle Bookmarks

Scuttle bookmarks plugin adds Scuttle sites support with the help of Automatic Scuttle Submitter to your Social Bookmarks Submitter installation for even more effective bookmarking. The plugin automatically transfers your domains and accounts to Automatic Scuttle Submitter installation and starts bookmarking instantly.

SOFTWARE SETTINGS

General Settings

This section is used to modify software settings, setup automatic captcha solving engine, configure bookmarking engine options, activate and deactivate extra features, enable advanced options and customize each single aspect of Social Bookmarks Submitter in order to make it as individual as you are.

Social Site Settings

This section is used to manage social bookmarking sites. If you don't want bookmarks to be submitted on some sites, they can be disabled to improve Social Bookmarks Submitter performance and reduce system resources usage. All disabled sites can be enabled at any time.

Database Cleanup Settings

This section is used to manage automatic database cleanup module and configure its settings.

It's recommended having automatic database cleanup module enabled because it highly improves Social Bookmarks Submitter performance and reduces system resources usage by removing used keywords, out-of-date reports, and other old data that is not used anymore.

Check for Updates

This section is used to check for Social Bookmarks Submitter updates.

PROXY SERVERS

Add New Proxy Servers

This section is used to add new proxy servers that are used for bookmarking. If more than one server is added, Social Bookmarks Submitter will automatically select a random server each time when bookmarking engine is launched.

Unlimited number of proxy servers could be added here, but if any of servers is invalid or does not work properly, submissions will fail.

Edit Proxy Servers

This section is used to manage proxy servers that are used for bookmarking. If any proxy server needs to be permanently deleted, check the box near proxy address and click 'Edit Proxy Servers' button.

SOFTWARE REPORTS

Marketing Reports

This section is used to view bookmarking engine reports of Social Bookmarks Submitter. You can check bookmarking activity, submitted domains, and more. If any report needs to be permanently deleted, check the box near report date and click 'Delete Reports' button.

Extended Reports

This section is used to view extended reports of Social Bookmarks Submitter. You can check full activity and detailed reports of actions performed by system user. If any report needs to be permanently deleted, check the box near report date and click 'Delete Reports' button.

DATA IMPORT & EXPORT

Export Software Data

This section is used to export software settings and data to another Social Bookmarks Submitter installation. Simply copy desired data from export forms below and paste it into another installation using Import Software Data section. No changes should be made to exported data; copy/paste the data exactly as it is.

Import Software Data

This section is used to import software settings and data from another Social Bookmarks Submitter installation. Simply copy desired data from another installation using Export Software Data section and paste into import forms below. No changes should be made to imported data; copy/paste the data exactly as it is.

DASHBOARD SECTION

Mass Actions

This section is used to perform mass actions. With single mouse click it's possible to delete promoted domains and mark them as unused or reset meta tags, delete, activate and deactivate user accounts, enable and disable social sitesm delete proxy servers, delete system and marketing reports, and more.

Select actions you want to be performed and click 'Perform Mass Actions' button.

Cronjob Verification

This section is used to manually launch Social Bookmarks Submitter cronjobs and verify software installation. Extended and marketing reports section should always be checked first for more detailed information about possible issues.

It's recommended to use manual verification only if some tasks are not automatically launched or if you believe that cronjobs do not work properly. Any module can be manually launched using selected section below. If multiple modules need to be verified, they should be launched one by one (not all of them at the same time).

Each module will be launched in new window; please wait for confirmation message to be displayed before closing the window. If message of success is displayed, but the software still cannot be automatically launched, contact your hosting provider (not our support desk) and ask for assistance configuring cronjobs. If message of failure is displayed, simply contact our support desk for further investigation.

Cronjob verification command will launch the real cronjob as well. For example, if you test bookmarking cronjob, posting actions will be performed right after cronjob verification.

Change Password

This section is used to change administrator email and/or login password.

If you change administrator email address here, licensed email address will not be changed. Only the address used to send lost passwords will be modified.

Your new password must contain 6 or more symbols to be accepted.

Log Out

This button logs you out and closes Social Bookmarks Submitter administration interface.
